

ECE177: Programming I: From C...

Lab #1 — Windows Instructions

1 Introduction

Install WSL (Windows Subsystem for Linux)

1. Open windows PowerShell **as an administrator** by search

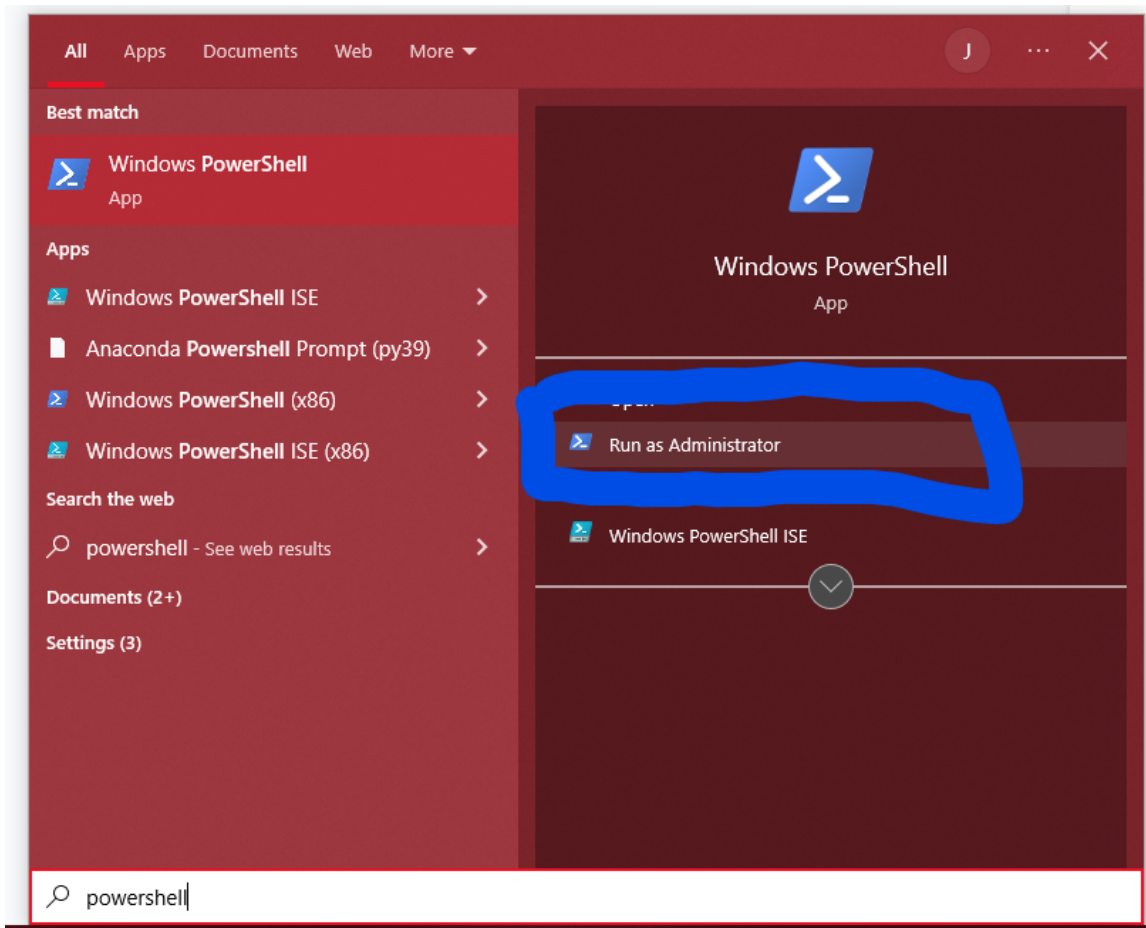

Figure 1: Installing WSL.

2. Setup WSL with

```
wsl.exe --install
```

3. Opening WSL Ubuntu on Windows

- (a) Once installed and after doing all of its updates (likely need a reboot), in the Microsoft App Store, search for “ubuntu on windows” and open it. (note possibly it might just be called “Ubuntu”)

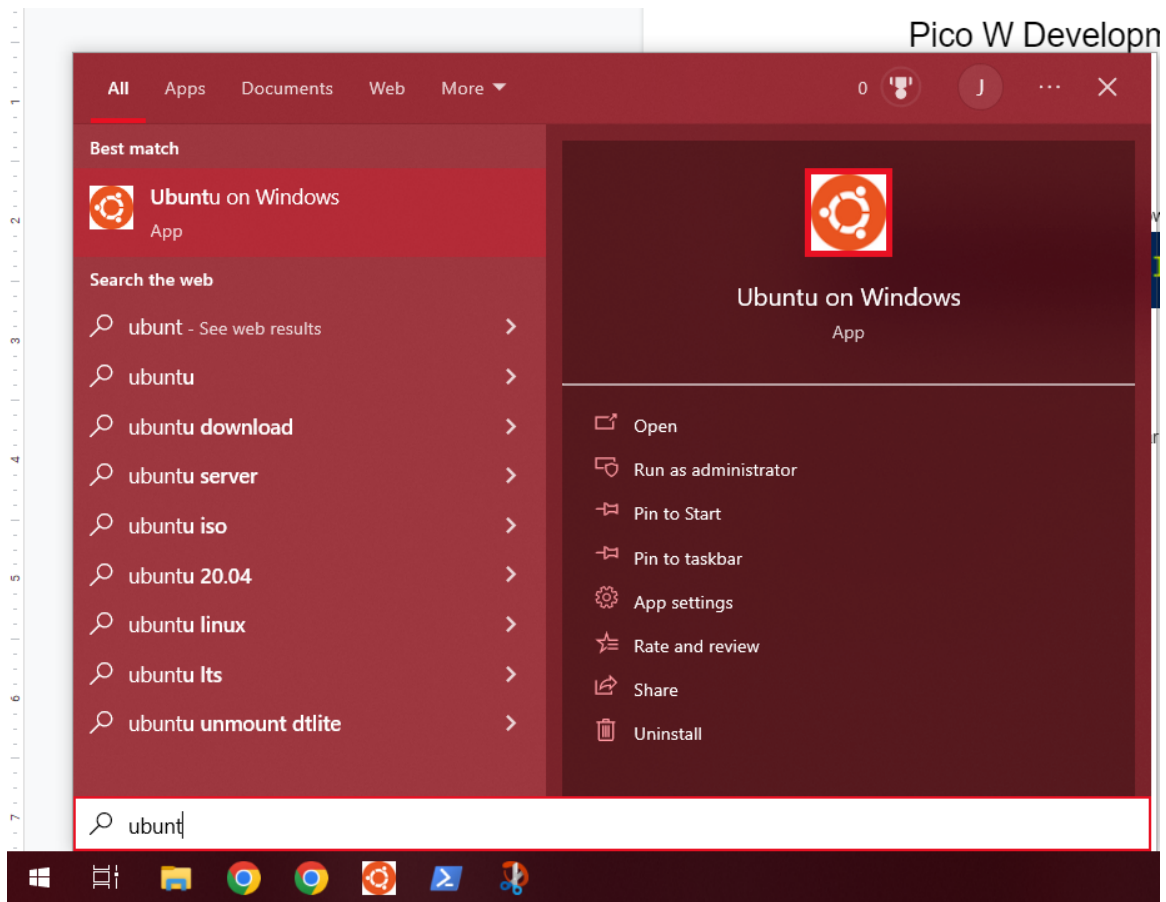

Figure 2: Finding Ubuntu.

- (b) **NOTE:** after installing in the powershell window it will ask you to make a username and password. When you enter the password it will appear that you are not typing BUT YOU ARE. (this is a security feature of Ubuntu).

4. Installing WinUSB Driver

- (a) Install Zadig and use it to install WinUSB driver <https://zadig.akeo.ie/>
- (b) Note to get this step to work you will have to connect the Pi Pico to your laptop using the USB cable

Figure 3: Installing USB driver with zadig.

5. Installing GCC C Compiler

- (a) Do this in an Ubuntu for Windows terminal
- (b) Install GCC using the following two commands

```
sudo apt update
sudo apt install build-essential
```
- (c) Verify installation by running the following command

```
gcc --version
```

6. Installing VS Code

- (a) Either Search for VS Code in the Microsoft Store and install

Figure 4: Installing VS Code.

(b) *or* Download and install VS Code from <http://code.visualstudio.com/Download>

7. Installing Putty

(a) Search for putty in the Microsoft Store and install

Figure 5: Installing PuTTY serial console software.
