

## **ECE574: Cluster Computing – Homework 1**

**Due: Thursday 19 January 2023, beginning of class**

Be prepared to share the results of this homework in class on Thursday.

Also please e-mail the answers to me (plain text, pdf, word document) for grading purposes.

First, if possible, watch some of this year's Top500 list BoF session from Supercomputing. The key parts to watch are the 15 minutes or so from 43:30 to around 59:00.

<https://www.youtube.com/watch?v=owwbjEsmr-Q>

You can watch more if you want, but it is a bit long.

Next, go to the Top500 Supercomputer site [www.top500.org](http://www.top500.org), find the November 2022 list (from the LISTS pulldown), and research the background of supercomputer in the slot number I handed out in class. If you missed class, let me know, and I can send you a number. Note: the website can be hard to navigate. Click on "The List" sidebar to find machines beyond 1-10.

Report the:

1. Location (Country)
2. Processor Architecture (x86/power/ARM/etc)
3. Processor Type
4. Total number of Cores
5. RMax/RPeak
6. Power Consumption
7. Any accelerators (GPUs, XeonPhi, etc)
8. Any interesting info you can find on this machine (you can use sources other than top500.org)

Please bring your results to class on Thursday, we will discuss your findings during class.
